

ORBITAL THERAPY

## Orbital Therapy Signs Aktina for US Distribution of ClearVue™ prone breast radiotherapy table.

**Bedford, MA, Oct 14, 2009** – Orbital Therapy has entered into agreement with Aktina Medical Corporation to distribute their ClearVue™ prone breast radiotherapy table in the United States.

Orbital Therapy is manufacturing and developing products for the treatment of breast cancer. Company's all carbon fiber ClearVue™ prone position table addresses current and future requirements to deliver this emerging therapy technique. The product is currently in use in the United States and Europe. Placing the patient in the prone position reduces target motion, increases the separation between the target anatomy and critical structures such as lung and heart, and allows for better localization of the treatment area.

"Aktina is an ideal partner. Their dedication to customer satisfaction parallels our ideology, and our products complement their existing portfolio of high quality devices for radiotherapy", said Jason Koshnitsky, CEO of Orbital Therapy.

"The ClearVue™ prone breast system has been a welcomed addition to our product line at Aktina Medical. Orbital Therapy's dedication to superior design and craftsmanship is evident in the product line and we feel it compliments our existing systems excellently. The response we have gotten from our customer base in the early stages of this relationship has been overwhelming", said Nicholas Zacharopoulos, VP of Product Development at Aktina Medical Corporation.

Both companies will be showcasing the ClearVue™ prone breast system at the upcoming ASTRO meeting in Chicago.

**Orbital Therapy LLC**, a company located in Bedford, MA, was founded in 2006 to develop products for the treatment of breast cancer. Our innovative approach to the treatment of this particular disease will offer numerous benefits over currently used techniques and provide many benefits to the patient, as well as the care provider.
